

The only MDM built around the school and family needs

With our cloud-based Chimpa MDM (Mobile Device Management) solution you have all the tools needed to manage, monitor, keep safe from data theft and safety breaches iOS and Android-based smartphones, tablets and interactive flat panels within you school. Thanks to Chimpa the manager, the teachers and the parents have the power to set the limits to the use of the mobile devices.

It takes just a few minutes to make Chimpa up and running, ensuring an appropriate use of the devices.

Compatible with iOS and Android mobile operating systems

Deployment of Apps and contents, from Store and custom repository

Kiosk mode, Single-App mode, safety features, lock, remote wipe

Massive deployment of updates, settings and policies

Advanced scheduling features for an accurate planning

Apps and network usage analytic data gathering

Advanced tools for real-time geolocation and geofencing

GDPR-compliant separate management of data

Remote monitoring of the hardware status of the devices

Remote management of the interactive flat panels

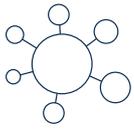

A stop to cyberbullying and to any inappropriate use of the Web

From school to home, we can build a 24/7 safety network

What are the main features of Chimpa MDM?

Distribution

Chimpa gives you the tools to consistently **deploy and manage** settings, policies, Apps, contents and updates, along with the certainty that every single device will be configured accordingly to its specific purpose.

Control

Chimpa gives you a wide array of tools for a granular management of the **restrictions** applied to the devices used among your school, preventing any undue use.

Monitoring

Chimpa gives you all the tools needed to **monitor and track** the hardware efficiency of the devices, sending you alerts if any issue is detected and allowing a prompt remote feedback, even in case of loss or theft.

Safety

Chimpa is a great solution for a BYOD-based approach, allowing the IT manager to manage separately personal and school data, in **full compliance with the European GDPR rules**.

4 good reasons to choose Chimpa MDM

1 ALL-ROUND

Chimpa puts you in complete control of all the devices at a school, classroom and home level

2 USER-FRIENDLY

Chimpa sports a friendly cloud-based interface, easy to master for users of any level of proficiency

3 BUDGET-FRIENDLY

Compared to similar solutions, Chimpa gives you so much more for so much less

4 TAILOR-MADE

Chimpa is a modular, flexible solutions you can build around your specific needs

What kind of device could you manage with Chimpa MDM?

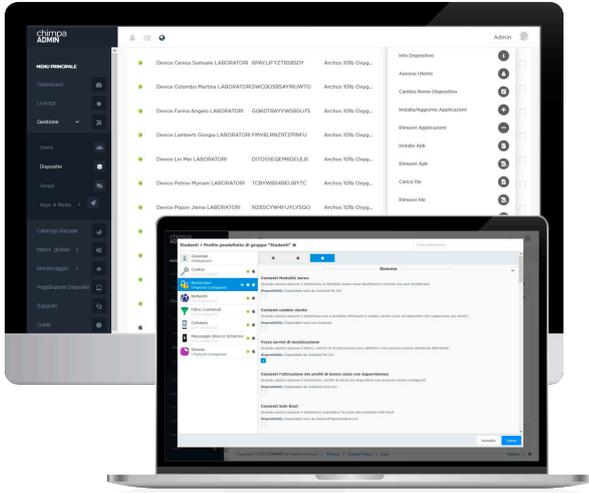

The scope of the possible applications is extremely wide: Chimpa is the perfect solution to manage any device running on iOS and Android, such as tablets, smartphones, interactive flat panels, library devices etc., distributing App, settings and contents in a fast, easy and consistent way.

Where could you effectively use Chimpa MDM?

There's no MDM like Chimpa. It allows **three different levels of management over any iOS and Android-based device**: the school manager will set the general rules, teachers will be able to take a real-time control of the classroom devices, families will set restrictions and schedules to manage the use of the devices at home.

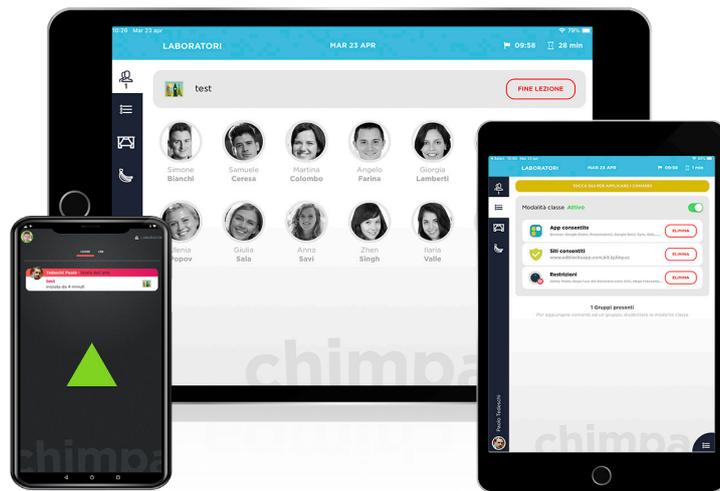

At school: administration panel

The administration panel gives the school manager a **full control over all the devices getting inside and outside of the school**, whether they are smartphones or tablets.

School, classes, groups or even single students could be associated to specific rules or profiles, including various levels of restrictions or a massive deployment of Apps (both from official Stores or custom repositories) and contents of any type, along with the relative licenses.

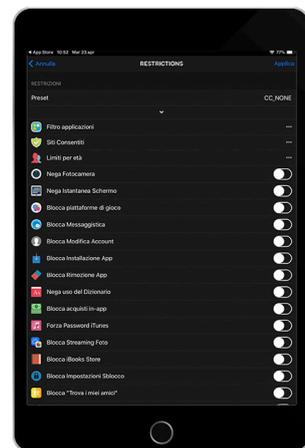

For example, **all the Apps unrelated to classroom activities** could be **hidden and made unavailable** from the Stores within the school timetable, under the school WiFi or even within the school area.

In the classroom: teaching Apps

The educational apps are a **Chimpa exclusive**: they allow the teachers to have a **real-time control over the students devices**, eg. fixing any app on the foreground, applying whitelists of allowed sites or completely blocking the devices of the whole class, of groups or of a single student. Moreover, **teachers could create a custom repository of Apps, eBooks and contents**.

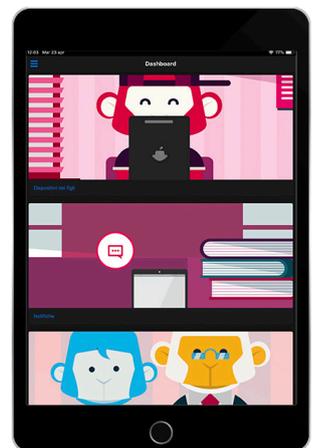

Chimpa has a double benefit, **blocking at the source inappropriate or illicit uses of the devices**, at the same time **leveraging a conscious, profitable and safe use of these tools**.

At home: Chimpa Home

When it's time for handover from school to family, **Chimpa continues to be a safety net** against any undue use of the personal devices.

Chimpa Home puts in the hands of parents and caretakers all the tools needed to **set rules and restrictions**, for example **blocking messaging apps or games when it's time to study or sleep**, monitoring the use of applications and the time spent in front of the smartphone or tablet screen.

What you need, when you need it

Thanks to its modular approach, Chimpa allows you to build a solution perfectly fit for your school. With Chimpa you can choose the services you really need, leaving the door open to further expansions.

EDU

This module is integrated with the most popular education suites, such as Apple School Manager for iOS and Google Classroom for Android.

ADVANCED

This is the essential module for a BYOD approach, giving the school a full access to all the GDPR-compliant data management settings.

ANALYTICS

This module is an essential tool when the main concern is about safety management, maintenance and App or network usage data gathering.

STANDARD

The 'Essential MDM Toolkit' provides all the tools needed to enroll and manage all the iOS and Android devices within your school.

CHIMPA 24

This module is designed for families and offers home control tools meant to prevent any undue use of the devices, such as cyberbullying, access to unsuitable contents etc.

MAM

The Mobile Application Management module includes all the tools needed for a massive Apps, resources and contents deployment, along with the corresponding license management.

GEOFENCE

The geolocation module tracks real-time the position of your school devices, binding the deployment of work profiles and restrictions to specific areas.

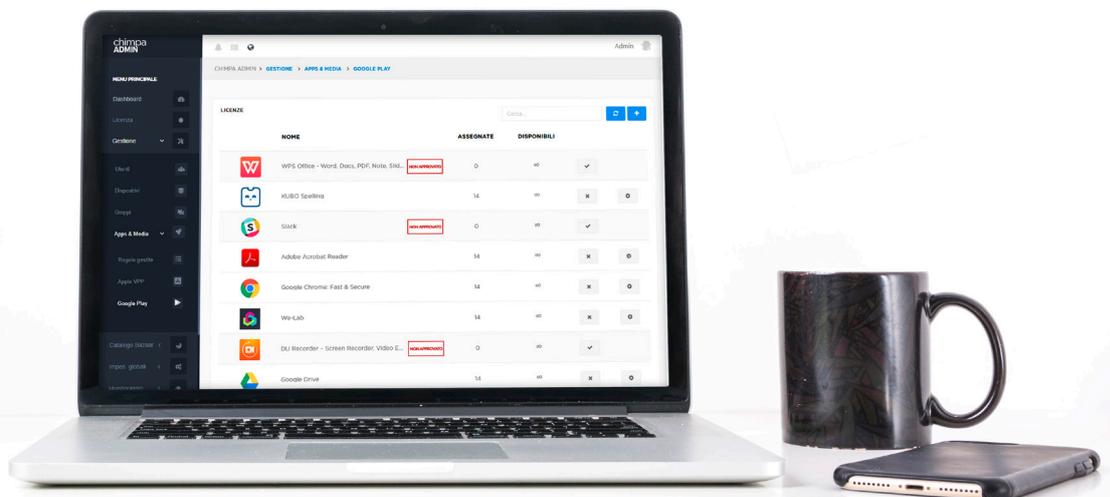

Choose the license fit for your school

SUBSCRIPTION

Annual or pluriannual subscription: suggested for a BYOD approach and a high turnover of devices among your school, since it allows you to redistribute the licenses at any time.

LIFETIME

Perpetual license: suggested if your school has a low device turnover, since it permanently binds each license to a single device.

XNOOVA

Chimpa is a solution developed by **Xnoova S.r.l.** | Viale dei Mille 3, 29121 Piacenza (Italy)
